Docusaurus POC Overview

This Proof of Concept (POC) demonstrates how **Docusaurus v3** can be used as a **Docs-as-Code** platform for technical documentation.

It focuses on:

- **Markdown & MDX** authoring
- **Code examples** with syntax highlighting, line numbers, and copy-to-clipboard
- **Search** with a local search index
- **PDF export** of documentation
- **Responsive**, accessible UI with dark/light mode
- **Dead link detection** and CI/CD to GitHub Pages

What this POC shows

- A small documentation structure under docs/ with multiple pages
- Sidebar and table of contents navigation
- Built-in Docusaurus components such as **tabs** and **admonitions**
- A GitHub Actions workflow that builds and deploys the site
- A Node.js script that uses Playwright to export docs to **PDF**

How to explore

- Use the **left sidebar** to navigate between Intro, Getting Started, Code Examples, and Accessibility.
- Use the **search bar** in the navbar to search across docs and pages.
- Try the **theme toggle** in the navbar to switch between light and dark mode.
- Resize the browser window to see the **mobile navigation drawer**.

Proof it works

- **Search proof:** type `DOCUSAURUS_SEARCH_PROOF_9D2C7` into the search bar. This token appears on this page.
- **PDF proof:** open the exported PDF after deployment: [Download PDF](#)

`DOCUSAURUS_SEARCH_PROOF_9D2C7`
